

STANDARD FEATURES:

- Incorporates the synchron motor on a movement train
- Provides for a sweep second-hand and split-second accuracy
- AC voltage only
- Voltages from 24V to 240V available
- 24-hour movement available on some Type "C" movement models
- Type "C" movement is a brass movement with smooth continuous motion
- Type "D" movement uses aluminum plates for a simple clock movement with smooth continuous motion
- Self-resetting option is available with the "C" movement for customers who need to synchronize multiple clocks to a single master clock

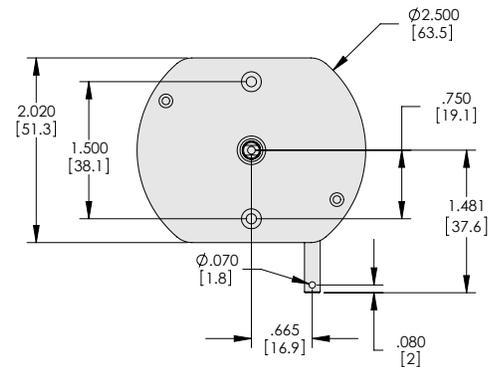

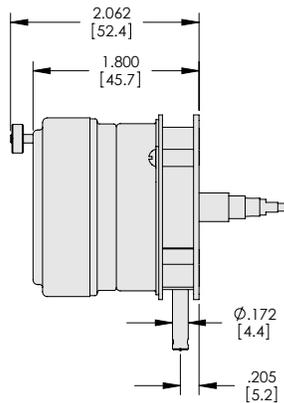

TYPICAL APPLICATIONS:

- Masterclock Systems
- Household/Decorative Clocks
- Timer Clocks
